Metrikus & VergeSense

BETTER TOGETHER: TURNING DATA INTO INSIGHTS

VergeSense and Metrikus partner to improve buildings by connecting building assets, sensors, and multiple data sources into a single digital platform. Our combined solution delivers transformative insights to make spaces productive, efficient, and sustainable..

VergeSense and Metrikus make data accessible and easy to understand. With real-time information on all aspects related to spaces and buildings, you can see everything you need to know at a glance. Understanding the health and usage of your space has never been easier with custom dashboards, reports, alerts, and rules.

How it works

CAPTURE

A network of wireless and wired occupancy sensors powered by computer vision, anonymously and accurately captures people count, occupancy, and objects within spaces. They're ceiling mounted and cover a wide area office floor, measuring the person count, active and passive occupancy of the spaces in that area. The data is then processed and reported at the space level.

ANALYZE

VergeSense AI continuously analyzes data to generate a true understanding of people count at scale across spaces and how their actually being used. The data collected from VergeSense helps workplace leaders and facility managers understand multiple forms of occupancy by portfolio, floors, spaces type, how they're using them, and the times, days and frequency of each.

OPTIMIZE

The Metrikus Data Warehouse stores all of the data collected and is easily accessible. From there the data can be filtered into customizable analytics dashboards and exportable reports.

Deliver efficient facilities operations and safe employee experiences

PROBLEMS WE SOLVE

Key benefits

- Reduce the environmental impact of your building to increase its long-term value and achieve net-zero goals
- Create a healthy and productive workplace with optimal indoor air quality and space planning
- Ensure the maintenance and use of your building is optimized to reduce operational and real estate costs

Transform data into a **powerful decision-making** tool to make buildings work smarter, not harder

VergeSense is the company behind the Occupancy Intelligence Platform. Over 160 companies across 43 countries rely on VergeSense for a true understanding of how their portfolios and spaces are actually used so you don't have to compromise between reducing cost and improving employee experience.

www.vergesense.com

Metrikus is a building efficiency platform that helps organizations to make their building space more efficient, productive, and sustainable. Their cloud-based software aggregates raw building data into one central place and then transforms it into analysis-ready data. These actionable insights can either be visualized on dashboards on their web application or, via our API, they offer Data-as-a-Service (DaaS) to push data into any third-party application.
